The Complete 2009 Series

# Rub Ease

CANADA'S MOST EFFECTIVE AND FASTEST ACTING PAIN RELIEF CREAM!

Newco's Rub Ease (formerly Glucosamine Rub) targets pain and inflammation from head to toe to ease sprains, strains and muscle aches. It contains **Arnica Extract** for bruising as well as **Glucosamine Sulphate**, **Chondroitin Sulphate** & **Hyaluronic Acid** to help regenerate and protect joint tissue. Fortified with **MSM (Methylsulfonylmethane)**, this cream also includes **Menthol** and **Methyl Salicylate** for their topical analgesic attributes and **Peppermint Oil** for its warming and cooling properties.

**Arnica Montana Flower Extract** – Arnica has been applied topically for hundreds of years for sprains and bruises and to help soothe muscle aches & pains. It has also been shown to be beneficial for reducing inflammation and swelling.

**Glucosamine & Chondroitin Sulphates** – Glucosamine Sulphate is the most widely recognized and used natural ingredient for arthritis. It has the ability to re-build damaged cartilage and has been shown to help relieve pain and stiffness associated with arthritis as well as help improve joint function and mobility. Chondroitin Sulphate has shown the same pain relieving effects while also enhancing the properties of Glucosamine Sulphate. A 2002 trial (randomized, double blind and placebo controlled) of a topical pain cream containing Glucosamine and Chondroitin Sulphates as well as Camphor concluded that topical application of Glucosamine Sulphate & Chondroitin Sulphate was effective in relieving the pain from Osteoarthritis of the knee. Improvement was seen within four weeks. \*the amounts of these nutrients used in the study were lower than the amounts present in Rub Ease\*

**Hyaluronic Acid (H.A.)** – H.A. is found in the synovial fluid that surrounds the joints and is a key component in cartilage. Another benefit of Hyaluronic Acid is it's ability to act as a delivery agent to help deliver active ingredients into the skin.

**MSM (Methylsulfonylmethane)** – MSM is a sulfur compound commonly found in a variety of foods. MSM can help with pain and inflammation and is beneficial for the health of the muscles, joints and skin. It is also a detoxifying agent and can help support the immune system.

This cream may provide relief from the pain of sport injuries and inflammation, arthritic pain, sore muscles, painful joints and bruises.
